

Folding paper squares

You will need some small squares of paper. Fold a piece of paper so that you can see 4 small squares. You will only be able to use 2, 3, 4, 5, 6, 7, 8, and 9. You cannot use a number twice. Write single digit numbers on the front and back of the paper, so that when you fold it you create 8 pairs of numbers. Multiply the each pair.

8	6
9	5

Front

7	3
2	4

Back

Where do you need to write the numbers 2 → 9 on your square to get these products? 16, 18, 20, 24, 27, 35 and 42
