## Counting

**Children often enjoy** playing games with dice.

**Adults could** use this to develop connections between the number of dots on a dice and counting actions.

### The Activity

Draw a giant 'drainpipe' outdoors. Children choose to be either the sun or the rain. They take it in turns to throw the dice and move the spider up or down the drainpipe according to their role. They use giant dice with dots to determine how many jumps to take and direct the 'spider' who counts each jump after landing.

### Encouraging mathematical thinking and reasoning:

#### Describing

Where are you now?  
How many jumps did you make?

#### Recording

Can you put something on paper to show what numbers you threw or to show someone what you learned from the game?

#### Reasoning

Why did the sun win, do you think?  
You've thrown two: what do you have to do now?  
How many steps more have you got to go?  
You've thrown three - will that get you to the end?  
How many turns do you think you will need to get to the end? What do you think will happen?  
Why?

#### Opening out

Could we make another game like this? What could we use?

# The Mathematical Journey

## Counting:

- remembering the order of number words as they count
- synchronising saying one number word with landing on each square
- remembering the 'stopping number' so that the required number of steps are counted

## Partitioning numbers:

- knowing how many more steps remain

## Number recognition:

- recognising the number of dots on the dice
- associating the numeral or the number of dots with the number of jumps along the track

## Relative number size:

- knowing that a bigger number means going further

## Development and Variation

You could play other games which involve tracks, like snakes and ladders, especially on large or outdoor tracks where the children jump along, counting as they land.

For less-experienced children, play games where they throw the dice and fill up the track with counters, so they are counting objects, which is easier than counting moves. You can make tracks or grids to fill up with any objects the children are interested in, like shells, or which are readily available at home, like coins.

There are many commercially produced games that involve turn-taking and counting, and that are valuable. Having dice and a variety of different tracks, both in and outside, encourages children to make up their own games too.

## Resources

Game board (see next page) and a spider (or counter with a spider drawn or pasted on it)

Outdoor track drawn with chalk or painted with powder paint

Dice (large foam for outdoors) or spinners with 1, 2, 3 dots and another with numerals 1, 2, 3, (or mixed)

A spider hat for a child would be fun

Paper/whiteboards and pens if recording

# Playing Incey Wincey Spider

Incey Wincey Spider - a game for two players

Incey Wincey Spider  
Climbing up the spout;  
Down came the rain  
And washed the spider out.  
Out came the sunshine  
Dried up all the rain;  
Incey Wincey Spider  
Climbing up again.

One of you is the sunshine  
and one of you is the rain.  
The spider goes in the middle.  
Throw a dice to see  
how far the spider goes.  
The sunshine makes the spider  
go up the drain pipe.  
The rain makes it go down.  
If the spider gets to the top,  
the sunshine wins.  
If the spider gets to the bottom,  
the rain wins.
